

# Ethnographic study on open-source closed-loop systems in type 1 diabetes care

**How did we proceed:**

We conducted an ethnographic-empirical study on the #WeAreNotWaiting movement in Germany for open-source closed loop systems for type 1 diabetes therapy.

**Results:**

The study shows how people with type 1 diabetes are establishing new forms of self-care and political participation in the health sector through creative use of technology, collaborative learning and digital networks.

**What is special:**

This work is the first ethnographic study on the #WeAreNotWaiting movement in Germany.
